

Coding Test: WordPress Developer

Project Requirements:

1. Create a custom WordPress plugin that provides the functionality described above.
2. Use WordPress coding standards and best practices when developing the plugin.
3. Use the WordPress shortcode API to create a shortcode that can be used to display the current date and time.
4. Ensure that the shortcode displays the date and time in the format "Day, Month DD, YYYY HH:MM AM/PM".
5. Allow the user to specify the timezone to use for the date and time display.
6. Ensure that the plugin is well-documented and that all functions, hooks, and filters are properly commented.
7. Test the plugin thoroughly to ensure it is free from bugs and errors.

Deliverables:

1. A fully functional and well-documented WordPress plugin that provides the functionality described above.
2. The plugin should be compatible with the latest version of WordPress and should not conflict with any other plugins or themes.
3. A documentation file outlining the project, including the plugin's functionality, usage instructions, and any custom code or functions used.
4. Please indicate how much time taken to complete the project.

Evaluation Criteria:

1. Quality of code and adherence to WordPress coding standards and best practices.
2. Ability to use the WordPress shortcode API to create a shortcode.
3. Attention to detail and ability to display the date and time in the required format.
4. Ability to allow the user to specify parameters for the shortcode.
5. Ability to thoroughly test the plugin for bugs and errors.
